

$f_2 \ll \text{MIRROR THICKNESS}$

$l_0 \equiv \text{ARC LENGTH OF MIRROR SURFACE}$

ASSUME WE HAVE A PARABOLIC MIRROR SEGMENT. THE EXTENT OF THE MIRROR IS SMALL WRT THE RADIUS OF CURVATURE. INTRODUCE A SURFACE ROUGHNESS TERM.

$$f(l) = \sum_{n=1}^{\infty} f_n \sin\left(\pi n \frac{l}{l_0}\right)$$

PARABOLIC SURFACE

APPROXIMATED AS

FLAT SURFACE

FURTHERMORE, FOLLOWING THE DEVELOPMENT OF THE GENERALIZED PUPIL FUNCTION IN GOODMAN, WE NEED AN ABERRATION FUNCTION, $W(x)$, A PATHLENGTH DEVIATION NORMAL TO THE GAUSSIAN REFERENCE SPHERE IN THE EXIT PUPIL. ASSUME $W(x) = f(l)$. FROM GOODMAN, (5-19) GIVES THE DIFF PATT AS THE FRAUNHOFER INTEGRAL OF THE PUPIL FUNCTION AND THIS IS THE SAME FOR THE GENERALIZED PUPIL FUNCTION. THE INTENSITY PATTERN IN THE FOCAL PLANE IS, THEN

$$I_f(u) = \frac{A^2}{\lambda^2 f^2} \mathcal{F}\{P(x)\}^2$$

SUB (6-33) $W/P(x) = 1$

$$\begin{aligned} I_f(u) &= \frac{A^2}{\lambda^2 f^2} \mathcal{F}\{e^{jkW(x)}\}^2 \\ &= \frac{A^2}{\lambda^2 f^2} \mathcal{F}\{e^{jkf(l)}\}^2 \end{aligned}$$

BUT, TAKING A FOURIER TRANSFORM OF A SINUSOIDAL EXPONENTIAL IS NOT POSSIBLE, ANALYTICALLY. THUS, EXPAND THE EXPONENTIAL IN A TAYLOR SERIES BY FIRST APPLYING EULER'S FORMULA

$$e^{jkf(l)} = e^{j\theta}$$

$$= \cos(\theta) + j \sin(\theta)$$

$$= \left[1 - \frac{\theta^2}{2!} + \frac{\theta^4}{4!} - \frac{\theta^6}{6!} + \dots\right] + j \left[\theta - \frac{\theta^3}{3!} + \frac{\theta^5}{5!} - \frac{\theta^7}{7!} + \dots\right]$$

$$\cos(x) = \sum_{k=0}^{\infty} (-1)^k \frac{x^{2k}}{(2k)!}$$

$$\sin(x) = \sum_{k=0}^{\infty} (-1)^k \frac{x^{2k+1}}{(2k+1)!}$$

SUBSTITUTE

$$\begin{aligned} I_f(u) &= \frac{A^2}{\lambda^2 f^2} \mathcal{F}\left\{\left[1 - \frac{\theta^2}{2!}\right] + j \left[\theta - \frac{\theta^3}{3!}\right]\right\}^2 \\ &= \frac{A^2}{\lambda^2 f^2} \mathcal{F}\left\{\left[1 - \frac{(kf(l))^2}{2!}\right] + j \left[kf(l) - \frac{(kf(l))^3}{3!}\right]\right\}^2 \\ &= \frac{A^2}{\lambda^2 f^2} \mathcal{F}\left\{\left[1 - \frac{k^2 f_1 \sin^2(\pi \frac{l}{l_0})}{2}\right] + j \left[k f_1 \sin(\pi \frac{l}{l_0}) - \frac{k^3 \sin^3(\pi \frac{l}{l_0})}{3!}\right]\right\}^2 \end{aligned}$$

$f = R/2 \equiv \text{FOCAL LENGTH}$

$$I_f(u) = \frac{A^2}{\lambda^2 f^2} \mathcal{F} \left\{ \left[1 - \frac{\theta^2}{2!} \right] + j \left[\theta - \frac{\theta^3}{3!} \right] \right\}^2$$

$$= \frac{A^2}{\lambda^2 f^2} \mathcal{F} \left\{ \left[1 - \frac{K^2 f^2}{2!} \right] + j \left[K f - \frac{K^3 f^3}{3!} \right] \right\}^2$$

$$= \frac{A^2}{\lambda^2 f^2} \mathcal{F} \left\{ \left[1 - \frac{K^2 f_1 \sin\left(\pi \frac{d}{\lambda}\right)}{2} \right] + j \left[K f_1 \sin\left(\pi \frac{d}{\lambda}\right) - \frac{K^3 \sin^3\left(\pi \frac{d}{\lambda}\right)}{6} \right] \right\}^2$$

TSE SINE

$$\sin(\theta) = \theta - \frac{\theta^3}{3!} + \frac{\theta^5}{5!} \dots$$

SUBSTITUTE TSE OF SINE

$$= \frac{A^2}{\lambda^2 f^2} \mathcal{F} \left\{ \left[1 - \frac{1}{2} K^2 f_1 \left(\pi \frac{d}{\lambda} - \frac{1}{6} \left(\pi \frac{d}{\lambda} \right)^3 \right) \right] \right. \\ \left. + j \left[K \right] \right\}$$

GOODMAN pg 146

$F(x,y) \equiv$ COMPLEX AMPLITUDE TRANSMITTANCE FUNCTION
(GENERALIZED PUPIL FUNCTION)

$$F(x,y) = P(x,y) e^{jkW(x,y)}$$

$P(x,y) \equiv$ PUPIL FUNCTION

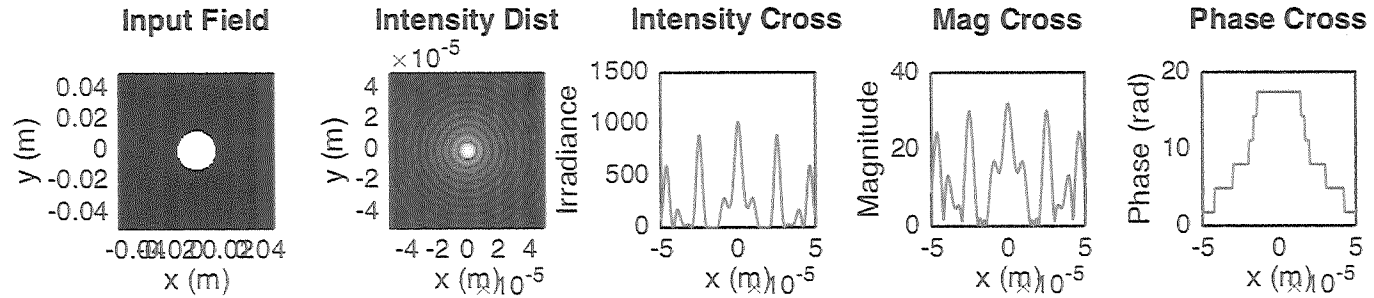

$W(x,y) \equiv$ EFFECTIVE PATH-LENGTH ERROR
(\perp TO GAUSS. REF. SPHERE)

QUESTION:

HOW DOES THE DEVIATION OF A PARABOLIC MIRROR TRANSLATE
TO AN EFFECTIVE PATH-LENGTH ERROR, $W(x,y)$?

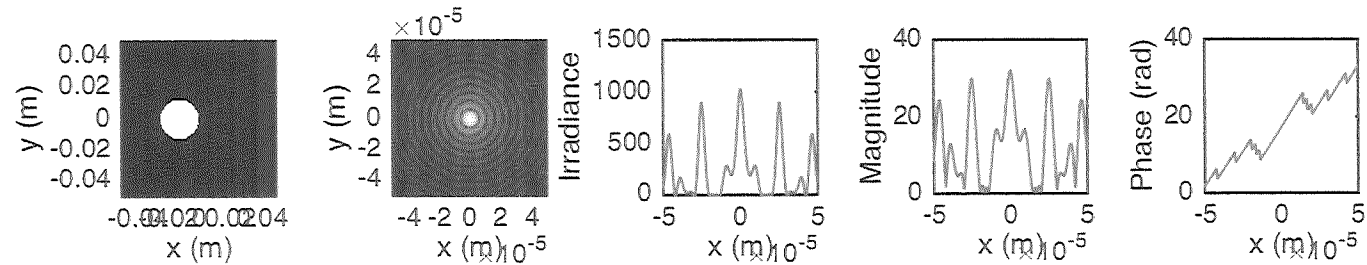

Focal Plane Diffraction Pattern

Centered & Ideal

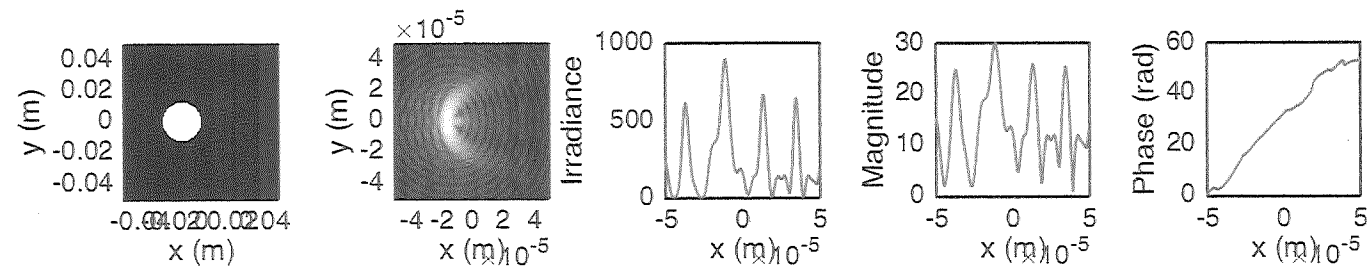

WHAT DOES
PHASE MEAN?

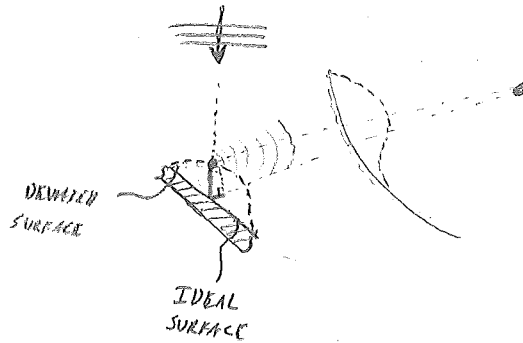

Off-Axis & Ideal

Off-Axis & Rough

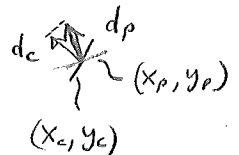

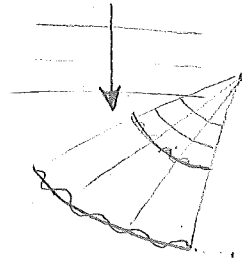

THE IDEAL PARABOLIC MIRROR REFLECTS A FLAT WAVEFRONT TO A CIRCULAR WAVEFRONT CENTERED ON THE FOCAL POINT. HUYGENS' PRINCIPLE CAN REVEAL MUCH ABOUT THE WAVEFRONT REFLECTED BY THE DEVIATED SURFACE

LET'S JUST SAY THE WAVEFRONT DEVIATION FROM THE GAUSSIAN REF SPHERE IN THE EXIT PUPIL IS EQUAL TO THE SURFACE ROUGHNESS TERM

CHANGE DEVIATION NORMAL TO PARABOLIC SURF ($d_p(r(x))$) INTO DEVIATION IN RADIAL (DIA OF REFL. RAY)

$$\vec{d}_p = |\vec{d}_p| \hat{n}_p(x, y)$$

LET US ASSUME THE MIRROR IMPARTS AN EFFECTIVE PATH LENGTH ERROR EQUAL TO $W(x)$ PROJECTED ONTO THE CIRCLE (GAUSS REF SPH) \Rightarrow PROJECT DEVIATION DEFINED NORMAL TO PARABOLA ONTO NORMAL OF CIRCLE

PARAMETRIC PARABOLA

$$x_i(t) = 2ft$$

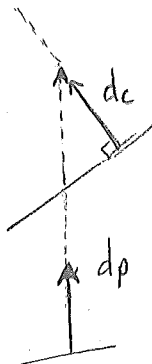

$$y_i(t) = ft^2$$

PARAMETRIC CIRCLE

$$x_i(s) = \frac{1-s^2}{1+s^2}$$

$$y_i(s) = \frac{2s}{1+s^2}$$

PROJECT: $\vec{d}_p(x_p, y_p) = \langle x_p, y_p \rangle - \langle x_{p_i}, y_{p_i} \rangle$ ONTO CIRCLE OF RADIUS (f)

* JUST ASSUME DEVIATION OF SURFACE NORMAL TO IDEAL PARABOLIC ARC IS EQUAL TO THE DEVIATION FROM GAUSS REF SPHERE IN EXIT PUPIL

\Rightarrow IMAGE INTENSITY DISTRIBUTION IS

$$(5-10) \& (5-14) \Rightarrow I_f(u, v) = \frac{A^2}{\lambda^2 f^4} \left[\iint_{-\infty}^{\infty} t_A(x, y) P(x, y) \exp \left[-j \frac{2\pi}{\lambda f} (xu + yv) \right] dx dy \right]^2$$

$$x_p = -2ft$$

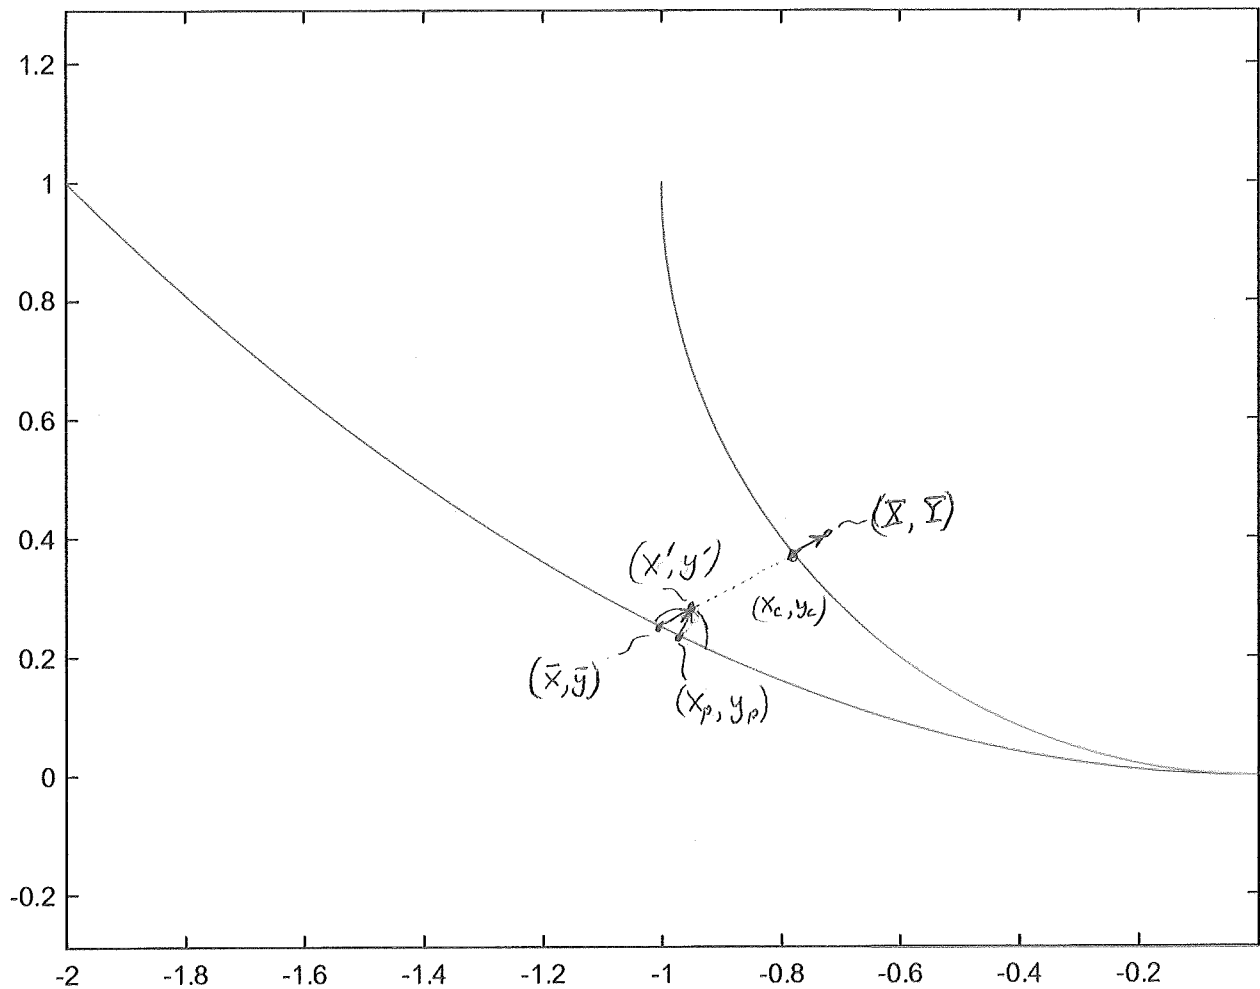

$$y_p = ft^2$$

$$x_c = -\frac{1-t^2}{1+t^2}$$

$$y_c = 1 - \frac{2t}{1+t^2}$$

$$\begin{aligned} y_c(x_c) &= \sqrt{r^2 + x_c^2} \\ &= \sqrt{r^2 + \left(\frac{1-t^2}{1+t^2}\right)^2} \\ &= \sqrt{r^2 + \frac{1-2t^2+t^4}{1+2t^2+t^4}} \end{aligned}$$

$$\begin{aligned} t^4 + 2t^2 + 1 & \left| \begin{array}{l} 1 - \frac{t^4}{t^2} \\ t^4 - 2t^2 + 1 \\ -(t^4 + 2t^2 + 1) \end{array} \right. \\ & \quad - 4t^2 \\ & \quad - (-9t^2 - 8 - \frac{4}{t^2}) \\ & \quad \quad \quad 8 + \frac{4}{t^2} \end{aligned}$$

$$\vec{d}_p(x, y) = \langle x', y' \rangle - \langle x_p, y_p \rangle$$

$$\vec{d}_c(x, y) = \langle x', y' \rangle - \langle \bar{x}, \bar{y} \rangle$$

$$I_f = \frac{A^2}{\lambda^2 f^2} \int \{t_A(x) P(x)\}^2$$

$$= \frac{A^2}{\lambda^2 f^2} \int \left\{ e^{-j \frac{k}{2f} (x^2)} e^{j k f_1 \sin(x)} \right\}^2$$

$$= \frac{A^2}{\lambda^2 f^2} \int \left\{ e^{j k \left[f_1 \sin(x) - \frac{x^2}{2f} \right]} \right\}^2$$

$$I_f(u) = \frac{A^2}{\lambda^2 f^2} \mathcal{F} \{ P(x) \}^2$$

$$= \frac{A^2}{\lambda^2 f^2} \mathcal{F} \{ e^{jK u(x)} \}$$

$$\Rightarrow V(\ell) = \sum_{i=1}^{\infty} C_i \sin(\pi i \frac{\ell}{\ell_0})$$

FOR PARABOLIC ARC, IF $\ell \equiv$ ARCLength

$$\ell(x) = \frac{1}{2} \left| x \sqrt{\frac{x^2}{f^2} + 1} + \frac{1}{2} \operatorname{asinh}\left(\frac{x}{f}\right) \right|$$

FOR SPHERE ARC, IF $\ell \equiv$ ARCLength

$$\ell(x) = \int_0^x \left[1 + \frac{\xi^2}{1-2\xi^2+\xi^4} \right]^{1/2} d\xi$$

FOR $\ell =$ RADIUS $= x$, $\ell_0 = R$, i.e. $W_0 =$ DEVIATION ON SURFACE IN DIR. OF FOCAL POINT W/ RADIAL POSITION

$$W(\ell) = W(x) = \sum_{i=1}^{\infty} C_i \sin\left(\pi i \frac{x}{R}\right)$$

\Rightarrow TAYLOR EXPANSION OF $e^{jK u(x)} = g_1(\cdot)$
